PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience in IT support, networking, systems, and software development through technical projects and laboratory work. Skilled in troubleshooting hardware and software issues, building web applications, and working with databases. Quick learner with a strong interest in technology, problem-solving, and building practical solutions.

SKILLS

Networking: LAN configuration, IP addressing, router & switch configuration, network connectivity, cabling, troubleshooting,

Systems: Windows, operating-system installation & configuration, home server administration, local file sharing

Programming: Python, C++, JavaScript, HTML/CSS, SQL

Web & Databases: Flask, SQLite, PostgreSQL, SQLAlchemy, CRUD, relational database design

Tools & Platforms: Git, GitHub, Render, pytest, Gunicorn, VS Code

Security: Password hashing, CSRF protection, rate limiting, basic cybersecurity practices

Soft Skills: Problem Solving, Critical Thinking, Communication, Research, Documentation, Independent Work, Teamwork

EDUCATION

Corozal Junior College

Associates Degree in Computer Science

Corozal, Belize

Aug. 2024 - June 2026

PROJECTS

Northstar Help Desk | *Python, Flask, SQLite, SQL*

- Designed and built a database-backed IT help desk system that models employee support requests from submission through resolution.
- Implemented ticket creation, prioritization, assignment, status tracking, filtering, and troubleshooting history using Flask and SQLite.
- Designed relational database structures connecting support tickets with chronological troubleshooting notes and resolution records.
- Developed a responsive web interface using semantic HTML and custom CSS to provide a practical internal support experience.

Retro Block Game | *Python, Flask, JavaScript, SQLAlchemy, PostgreSQL*

- Developed and deployed a full-stack web application with persistent user accounts, profiles, statistics, and a global leaderboard.
- Implemented authentication, password hashing, CSRF protection, rate limiting, server-side validation, and protected user sessions.
- Used SQLAlchemy with SQLite for development and PostgreSQL for production data storage.
- Created automated tests with pytest and configured production deployment using Gunicorn, GitHub, and Render.
- Built a responsive interface supporting both desktop keyboard controls and mobile touch controls.

Home Server & Network Lab | *Networking, Systems & Hardware*

- Built and configured a home server using repurposed computer hardware for hands-on systems and networking practice.
- Managed local file sharing and network connectivity while troubleshooting hardware, software, and configuration issues.
- Applied operating-system, networking, and system-configuration concepts to maintain a stable working environment.
- Used the server environment as a practical lab for developing troubleshooting and technical problem-solving skills.
